|----------------------|--|------------------------|--|---|
|                      | CATEGORY   |                        |  |   |
|                      | ROUND  |                        |  |   |
|                      | ENTRANT  |                        |  |   |
|                      | VEHICLE NAME   |                        |  | ı |
|                      | Form 2A shows how Team Managers are to care for their Riders and their vehicle.  |                        |  |   |
|                      | "Design & Construction Specifications 2024" must be read, with items referred to below by number.                        |                        |  |   |
|                      | Although Team Managers have overall responsibility, other Team members can fulfil various Items.                         |                        |  |   |
|                      | All Team Members have to be a part of Team protocols and ethos to meet the Items below.                                  |                        |  |   |
|                      | Items 1 - 3 are about Rider training, with Rider fitment covered in Items 4 - 14.  |                        |  |   |
|                      | Items 15 - 18 are vehicle maintenance checks.  |                        |  |   |
|                      | Items 19 -21 are for Training and Events and are significantly helped by Team Protocols.                                 |                        |  |   |
| 1                    | Each Rider has experienced a Roll-Over Test [or crash] to validate their harness wearing, their vehicle's protections,   |                        |  |   |
|                      | their helmet clea  | ırance, and to prac    | tise holding steering handles and looking straight ahead during a roll-over/crash. |   |
| 2                    | Each Rider is competent in a   | a Slalom Test of fou   | ır markers spaced 4.2metres apart.   |   |
| 3                    | Each Rider is developing the   | eir sense of traffic a | and track position.  |   |
| 4                    | Each Rider can sight overtal   | king traffic in their  | mirrors, with all-round-vision not obscured by window treatments or bodywork.      |   |
| 5                    | Each Rider in their riding po  | sition can see the     | ground 5m ahead and reach both mirrors.  |   |
| 6                    | Each Rider's clothing, hair, f   | ace, hands, and leg    | gs, are safe from the STEERING and DRIVELINE [wheels, spokes, chain, rollers].     |   |
| 7                    | Harness shoulder belt mour   | nts or guides are le   | vel with or higher than each Rider's shoulders.                                    |   |
| 8                    | Harness lap belt mounts and SEAT SHAPE [especially the front edge] maintain correct lap belt position for each Rider.    |                        |  |   |
| 9                    | Excessive seat padding is no   | ot being used for Ri   | ders. [Too much soft padding stops the harness from working properly]              |   |
| 10                   | Side impact protection cover   | ers shoulders, torso   | , hips, and legs down to knees, for each Rider.                                    |   |
| 11                   | An effective head restraint system fits each Rider to protect them during rear impact [TOP EDGE safely rounded/padded].  |                        |  |   |
| 12                   | For an Open Cockpit vehicle, Riders have 100mm minimum clearance above their helmet to the                               |                        |  |   |
|                      |  | Ri                     | der Rollover Protection Structure [RRPS] and Cockpit Overhead Protection [COP].    |   |
| 13                   | Closed canopy Riders have I  | proper head room       | and Specified Foam is above each Rider's head [4.9.3&4] incl. spare canopies.      |   |
| 14                   | Every Rider is covered by th   | e COP [4.10.1&2].      |  |   |
| 15                   | The harness is not visibly da  | amaged and is mou      | inted securely [5.2.1 - 5.2.11]  |   |
| 16                   | Structures of the Team's vel   | hicle comply with 4    | I.4.3 [Figure 5]   |   |
| 17                   | Cockpit safe for riders : fran<br>Batteries meet 2.2.4   | nework, panel edge     | es [2.3.3c], guarding, cable ends, cable ties, bolts, ducting, front wheels        |   |
| 18                   | Brakes, horn, speedo, canopy closures, tail-light, headlight [night Event] are all operational - CABIN AIRFLOW EFFECTIVE |                        |  |   |
| 19                   | Rider communications and device use minimise Rider distraction [Position Statement via 7.3.3]                            |                        |  |   |
| 20                   | Certified helmet [no device on it] correctly fitted for each Rider   |                        |  |   |
| 21                   | Harness will be adjusted for each Rider with the lap belt kept tightly on their pelvis.                                  |                        |  |   |
| 22                   | The vehicle will remain com  | pliant with the spe    | ecification and as scrutineered throughout the event.                              |   |
